- Led many trainings internally to strengthen the skill to align customer.
- Led Digital Transformations by proposing enterprise architecture.

About Me

- I came from software engineering background but over the years I realized that I like to talk to people more than sitting in my desk and code, this is a good mix where I can work with people, find out what problems are and work with SWE's and the engineering team to have them implement it. It is a dual language process.
- **Mission:** To help clients effectively achieve their goals on the Internet/Intranet/high-end enterprise SOA/RESTful API's/build standalone distributed apps by serving them as their technical developer, core member, needs analyst, strategic partner, and tool builder. Passionate about helping clients effectively use technology to achieve their business and organizational goals.
- Over **12** years of IT experience as a professional interactive services provider working with national & international clients providing end-to-end services for creating, implementing, and maintaining web, standalone business applications. Served as Trainee Software Engineer, Software Engineer, Senior Software Engineer, Module/Technical Lead, Solution Provider, TPM, Scrum master in different business/technical domains.
- Experience in a variety of industries including Health, Education, NASA Indian Research, Travel (Air Lines), Multi-Level Marketing, Indian state government (Andhra Pradesh state government (SBTET), Telangana State government (SERP), Digital Transformations, Financial Services, Global Consulting Firms, Recruitment domain.
- Provided mentoring support to Product Owners and team members to refine their understanding of Agile practice- Empowerment.
- Desire to bring disclosure and transparency to both business and IT and build trust amongst partners. – Transparency
